Transforming the banking experience

Building customer loyalty, making employees happier, and boosting revenues can be achieved by creating a superior product with an efficient process and seamless customer experience.

Recent surveys show that a satisfied customer is more likely to recommend a bank to his or her friends than those who have a negative perception. (5-8% greater). It is highly believable that the banks put tremendous resources into transforming the customer experience. The most effective transformations are the ones that not only consider the complexity of the relationship of the customers with the bank but also prioritize the part of the experience that matters most.

Some steps to improve the banking experience for the customers are :

1. Managing the master data.
2. Developing STP (straight through process).
3. Going Paperless.
4. Embrace omni channel delivery.
5. Implementing UFE (Unified front end).
6. Developing an excellent self-service proposition.
7. Engagement in customers financial management.
8. Transparency , security and trust.

Customer Engaging

with the banks today

With the expansion of digitization as a primary focal point for significant banks, the need to reevaluate marketing strategies have become a considerable concern. Customers have changed the way they interact with banks, and the same does not hold for the inverse.

The top priority of a bank is to acquire new customers. However, to generate near-term profitability and long term relationships, the bank must fully engage customers. It is vital for a bank as this helps a bank to differentiate their brand in the market.

Customer engagement is a means used by the banks to foster their relationship with prospects and customers. It is not something that can be achieved in a day, week, or a month but rather a more long term task.

The current trends of customer visiting the banks are as shown below:

Why do you prefer to do basic payment activities via financial technology company services vs. using similar services provided by your bank? Select all that apply.

Base: Has a checking or saving account, has used payment services from a fintech company, and prefer fintech over bank services.

 Millennial 22-37 Yrs	 Generation X 38-53 Yrs	 Baby Boomer 54 & above

Customer Engaging

with the bank today

Below we can see, how the people interact with the banks for various needs:

What is the main way you currently perform the following tasks with your bank?

(1/7) ROUTINE TRANSACTIONS (E.G. DEPOSITS, TRANSFERS, BILL PAYMENTS)

(2/7) Seek Advice On Accounts / Service Needs

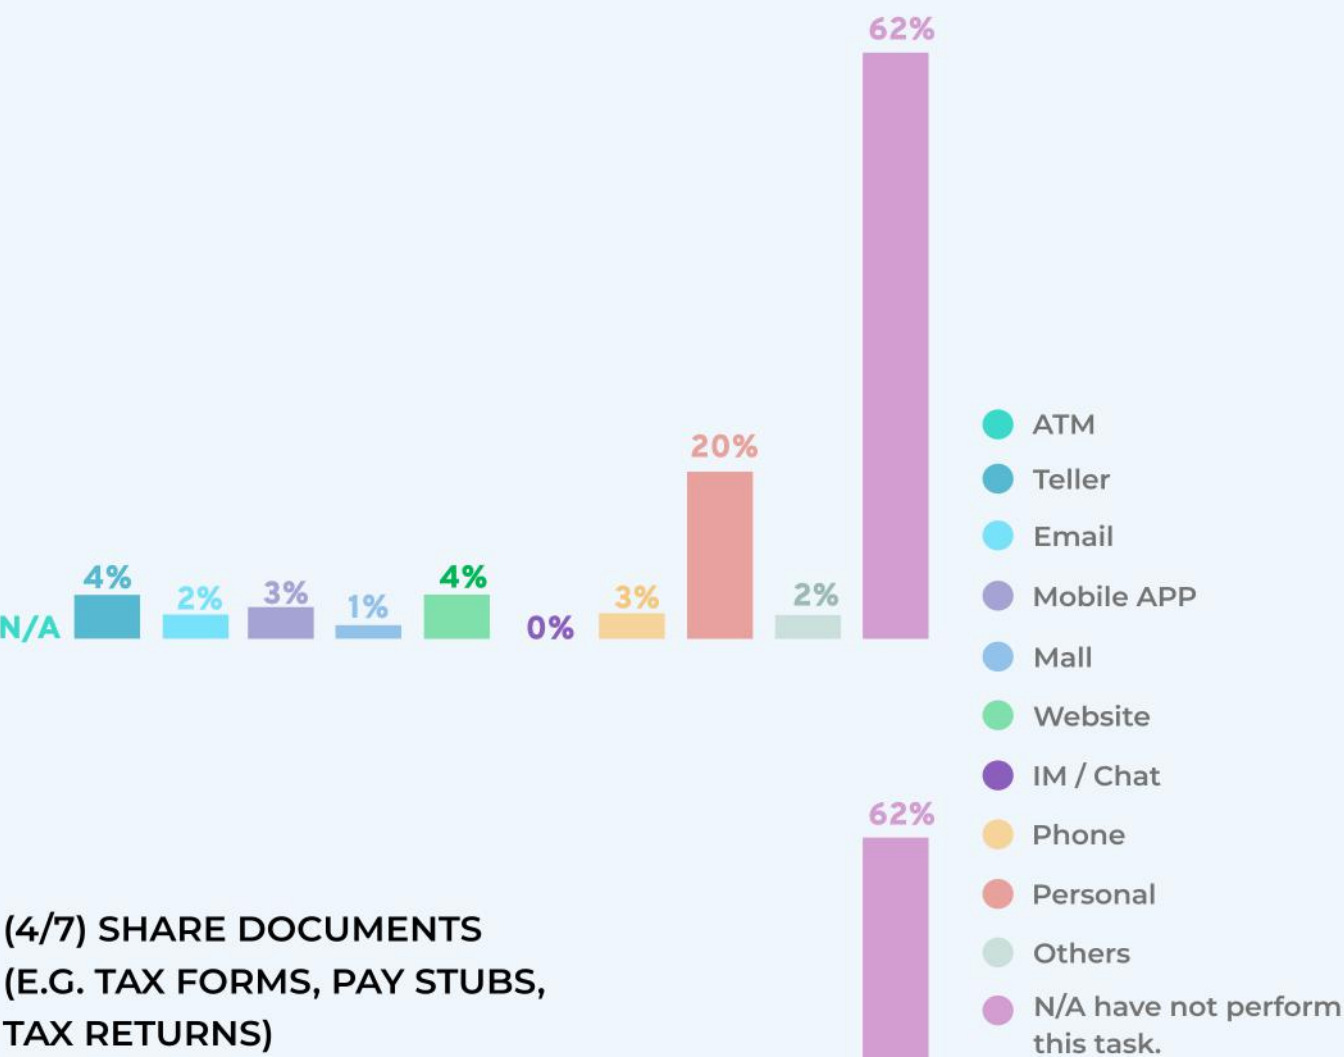

Customer Engaging

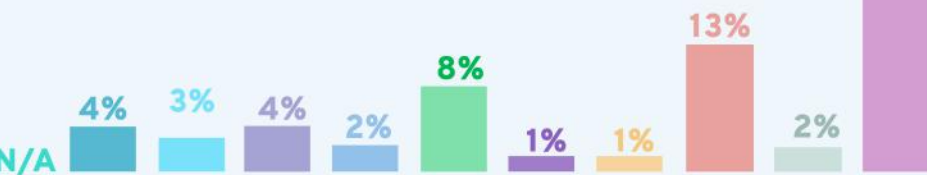

with the bank today

(3/7) SEEK ADVICE ON INVESTMENTS / MONEY MANAGEMENT

(4/7) SHARE DOCUMENTS (E.G. TAX FORMS, PAY STUBS, TAX RETURNS)

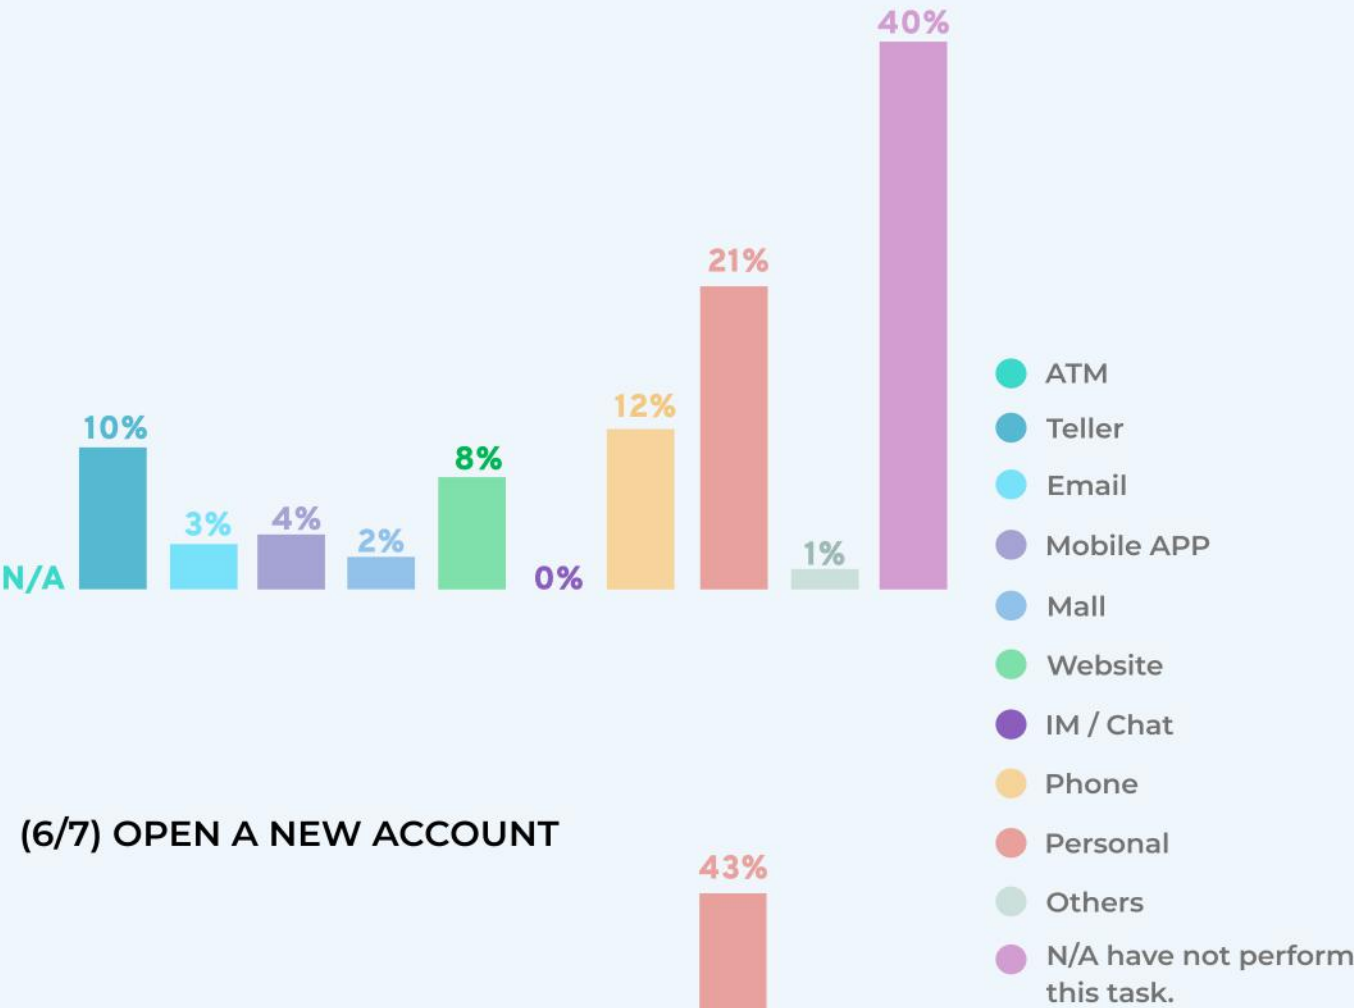

Customer Engaging

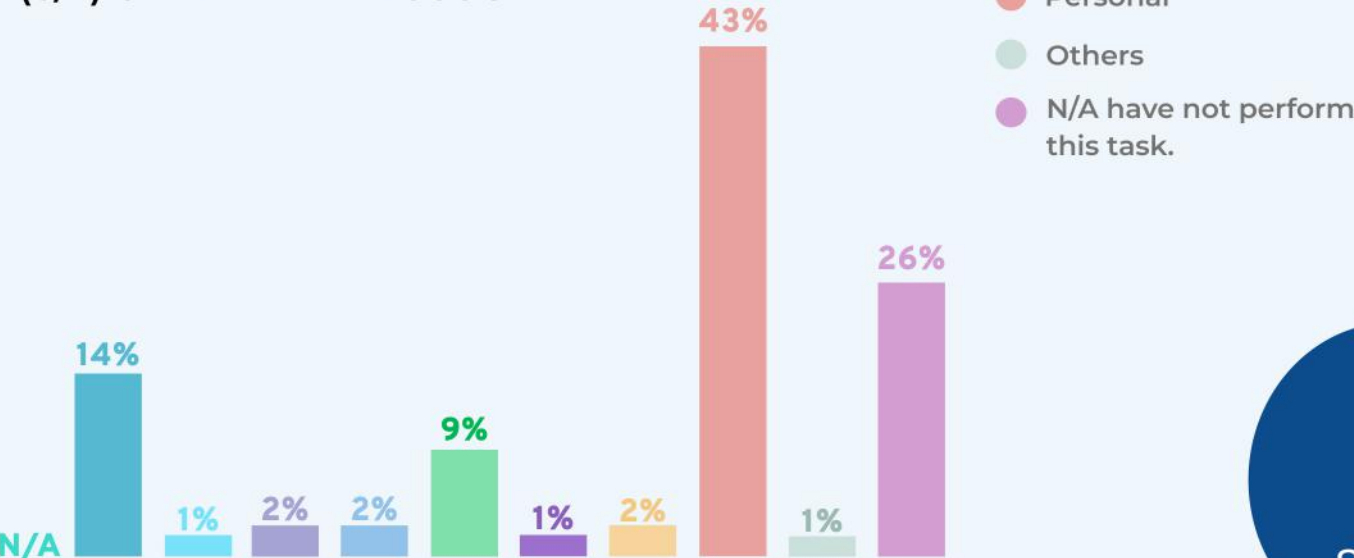

with the bank today

(5/7) COMPLEX REQUEST
(E.G. TRANSACTION DISPUTE, WIRE TRANSFERS)

(6/7) OPEN A NEW ACCOUNT

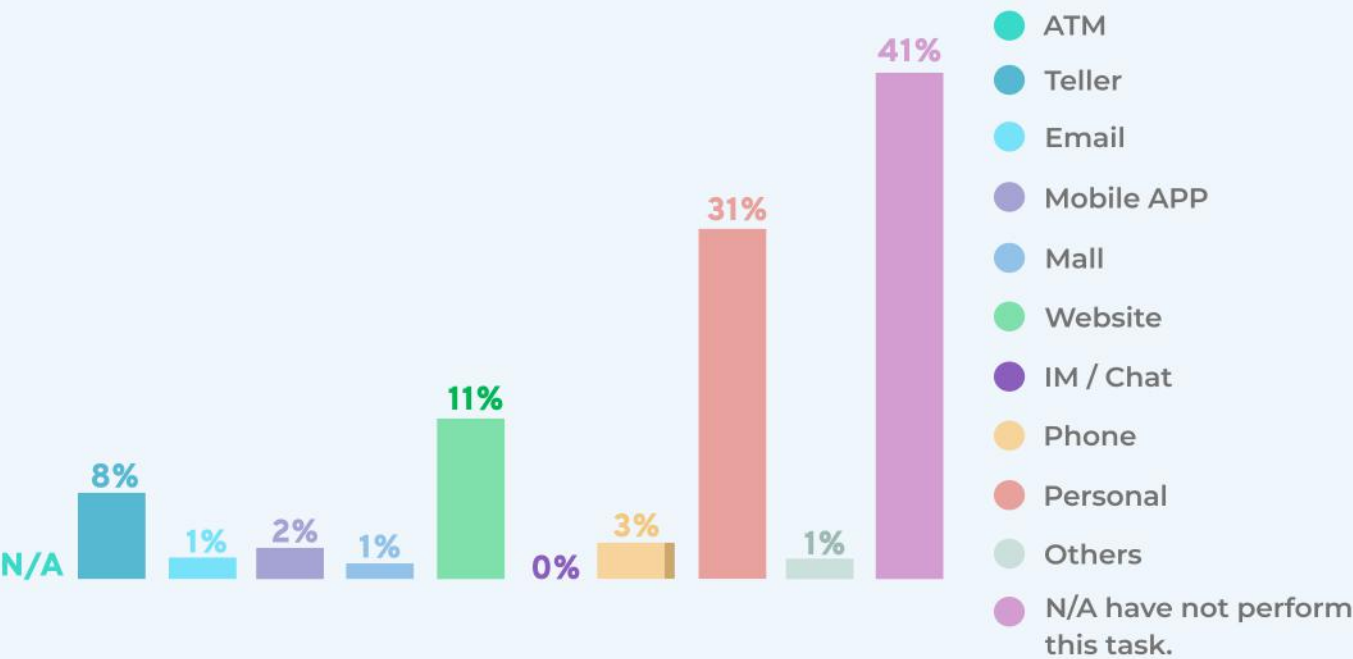

Customer Engaging

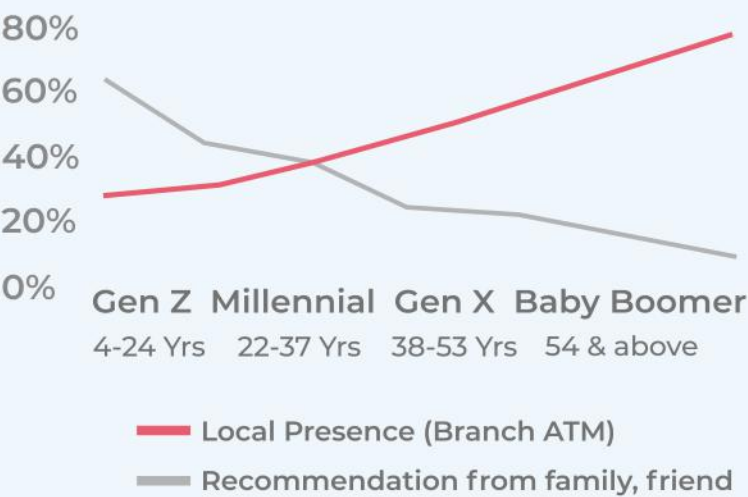

with the bank today

(7/7) SELECT / PURCHASE NEW BANKING SERVICES
(E.G. LINE OF CREDIT, MORTGAGE, BUSINESS LOAN)

We can also see what the factors that influence customers to open a primary bank account are.

Consumers choose a primary bank for a variety of reasons

Understanding how consumer behavior differs by generation is a key factor in establishing the consumer-bank relationship.

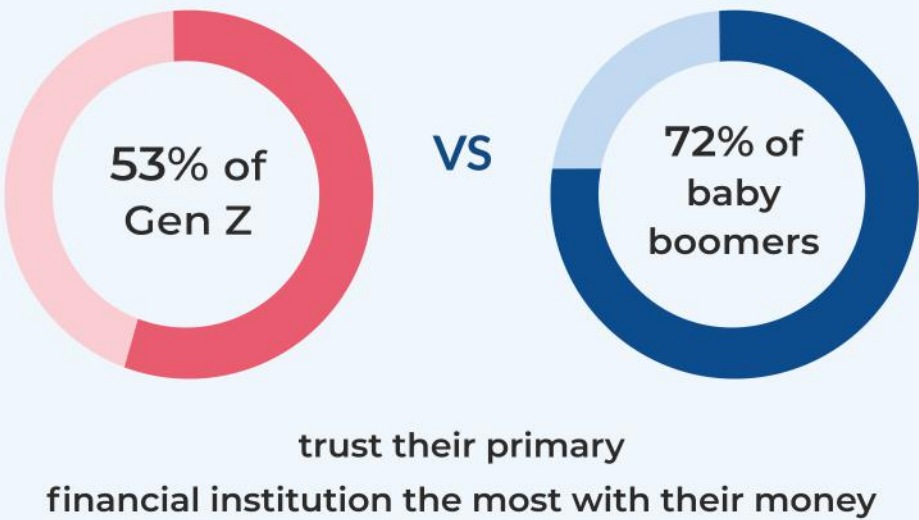

Customer Engaging

with the bank today

We can also see how engaged customers have more products from their primary bank:

Trust affects how consumers form relationships.

25% of Gen Z do NOT own a checking account: those who do are 2x more likely than boomers to NOT hold it at what they consider their primary bank.

79% of Gen Z credit card holders have a card through their primary bank vs. 61% of baby boomers.

25% of Gen Z mortgage holders, consider that bank to be their primary vs. only 15% of baby boomers.

Impact of CBS on Retail Banking

With advances in technology and modern internet, banking systems worldwide have experienced a massive transformation. Bank have emerged as an integral part of the economy and financial system from merely a place to deposit and lend money. This drastic change in the banking system occurred due to the introduction of Core Banking Solution (CBS).

The technology is back-off by the banks by providing life cycle wise products and services under one roof. Some of the features which help banks to gain their prominence are:

1. Customer relationship management.
2. Use of data analytics.
3. Human Resource Management.
4. Mobile Banking.
5. Capital Adequacy Framework.
6. Alternate Channel.
7. Treasury System.

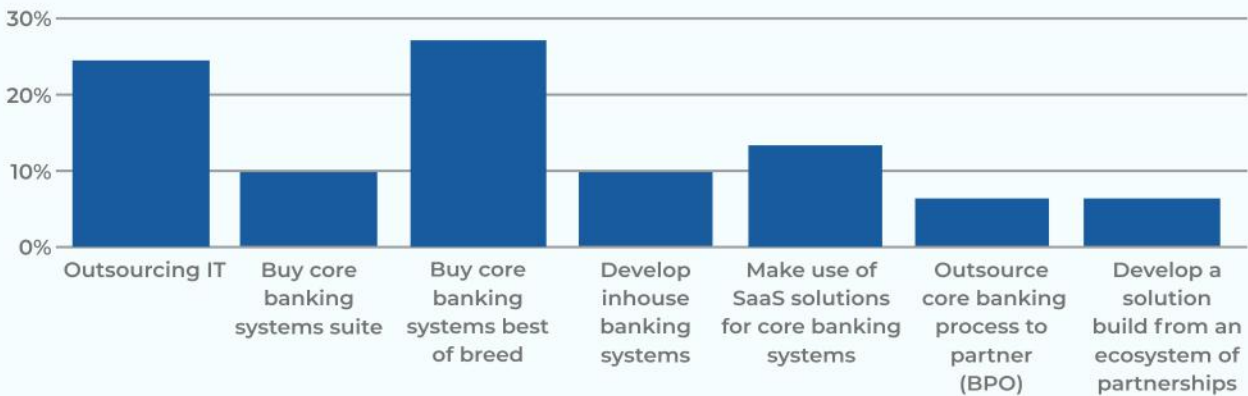

Impact of CBS on Retail Banking

The below survey shows strategies towards banking:

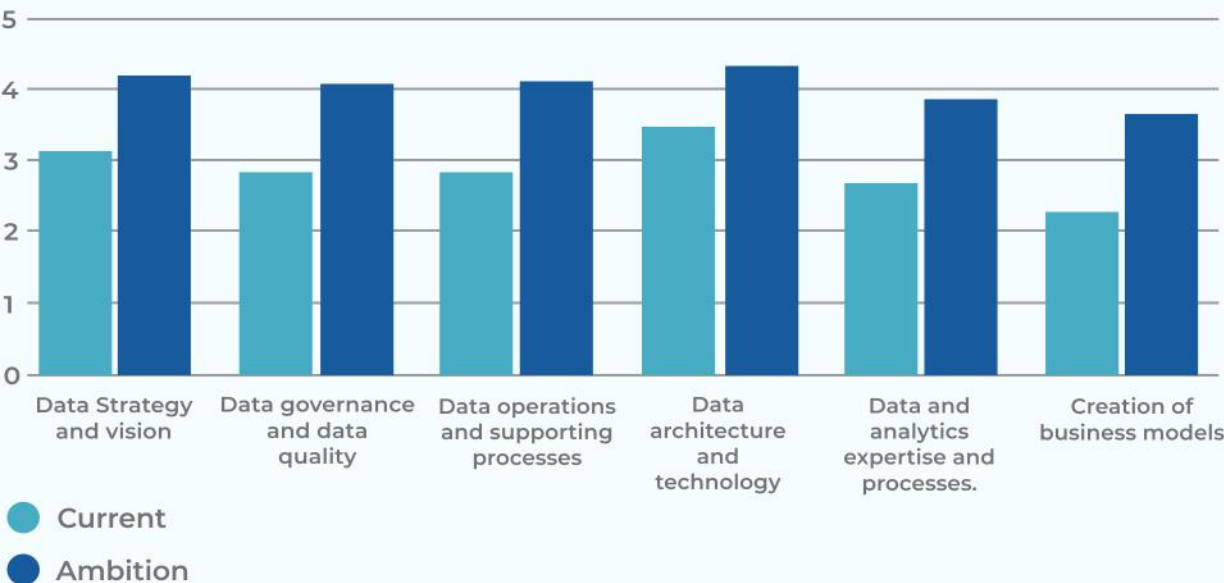

Strategies towards main banking

Survey participants could choose one or more answers

We can also see how data maturity is handle in the banks:

Data maturity; current and ambition

Impact of CBS on Retail Banking

CBS technology has developed a lot in recent years. It has brought improvements in planning, management, and platform design. CBS platforms deploy and integrate emerging technologies in a better way, thus leading to smoother implementation. Banks invest more up-front time in the planning and evaluation process, which helps reduce the errors and speed up the performance for helping in faster delivery.

Even though technology has played an essential role in the banking sector's advancement, there are still many banks that have not been able to reap the benefits of this technology. The technology needs to shift from employee-centric to customer-centric. The plan is to link the masterplan to the core architecture with specific milestones and KPIs to track the system's performance. It allowed the team to structure the CBS architecture around the set of valuable domains, such as consumer loans, trade finance, payments, helping the bank deliver new products ahead of its competitors.

Critical features of Core banking system are:

1. Opening bank account anytime, anywhere.
2. Processing and recording money deposit and cash withdrawal.
3. Calculating Loan Interest.
4. Processing Loans.
5. Cheque Clearance.
6. Maintaining Customer Relationships.
7. Banking Analytics.
8. Banking Products.
9. General Ledger
10. Day end/ year end operation

Although full-scale CBS transformation requires significant up-front planning and investment, evidence suggests that the resulting efficiencies and growth compensates for the cost and time required.

Trends In Banking

The banking industry and financial institutions are vital sectors of the economy that impact the country's growth incredibly. The formed partnership between innovative technologies and financial and banking services have changed the money handling. Trends that are bringing massive change are:

1. Enhanced Mobile Banking

The use of smartphones to perform various banking procedures without the need to visit a bank is defined as enhanced mobile banking. The trends in mobile banking hints at the acquisition of IoT and voice-enabled payment services have become the reality of tomorrow.

2. UPI

It is a real-time payment system that enables instant interbank transactions with the use of mobile platforms. In the future, banking will become more 'open' with the help of UPI.

3. Artificial Intelligence Robots

The adaption of chatbots or AI robots for assistance in customer service is booming. More chatbots with a higher level of intelligence are forecasted to be adopted by the banks for improved interactions, thus eliminating the chances of human errors and creating accurate solutions for customers.

Trends In Banking

4. Cloud Banking

Cloud technology has taken the world by storm. The use of cloud-based technology means improved flexibility and scalability, increased efficiency, and faster services and solutions. Also, the banks will not have to invest in expensive hardware and software.

5. Accelerating Focus on Digital Transformation

The industry is witnessing a continued and aggressive focus on digitization and adoption of new and emerging technologies to bring in operation efficiencies, enhance speed-to-market, and deliver superior customer experience. Digital wearable devices, which pack the power to smartphones, are making it increasingly feasible for banks to offer target services to customers.

6. Re-thinking Concept of Money

Blockchain is shaking up the very foundation of traditional business models with peer-to-peer lending, smart contracts, and digital payments, thus speeding up the underlying processes.

In addition to blockchain technology, cryptocurrency such as bitcoin, ethereum, and ripple are slowly gaining traction. The assets that were considered core are no more so, and controls that once served to protect themselves give rise to new regulations such as open APIs and PSD2.

7. Changing Consumer Behavior

Customer behavior in all industries, including banking, has radically changed over the last decade. The bank branch is no longer the only or even primary way for the customers to interact with banks. Looking into the future, the critical question that arises is whether the network strategy has evolved with these changing consumer behavior.

8. Prioritizing Customer Insights

The ability to give customers the right advice when they need it is one of the keys to a successful banking system. AI-Based software that provides customers with advice on saving, spending, and achieving financial goals. Not only does it help cement a customer relationship, but it can also lead to excellent sales.

Methodology

1. Digital innovation to unlock customer-first banking

Innovation is for growth, success, and customer satisfaction in all industries. Banking and financial services have ranked fourth out of the 12 most vulnerable sectors to digital disruption. However, only 10% of banks see themselves as innovative leaders. 73% of millennials are looking forward to a new financial service offering from companies like Google, Amazon, Apple, and Paypal.

The truth is that it is easier for a tech company to become a bank than for a bank to become a tech company. The winners harness their trove of digital data to meet the needs of the customer providing solutions, not just products.

1. Developing a customer-centric business model.
2. Optimizing distribution, offering services anytime, anywhere.
3. Obtaining information advantages.
4. Enable innovation and the capabilities required to foster it.
5. Proactively managing the risk, regulations, and capital.

Methodology

2. The needs-based customer-centric business model

In the past, banks have to view customers as often because customers were unsophisticated and uneducated about the banking process and financial products. It is no longer true now. Customers expect more from their banks; they expect solutions and a deep understanding of where they are on their financial life journey.

Banks are aware of the necessity to move away from a product-centric approach towards establishing a need-based customer model. Building a need-based model Banks require to focus on these areas:

1. Better and more enhanced customer data collection.
2. Evaluating bank performance and compensation from customer POV.
3. Segmenting the customers so they can be served better by a dedicated group of bankers.
4. Social media as a way of understanding and engaging with customers.
5. A mix of self-directed and interactive channels.
6. People and culture.

3. Personalizing relationship at scale in CRM

Banks must put significant efforts and resources to enhance data collection, evaluating performance, enabling configurable product features that customers choose, and creating agile, adaptable products and services.

To do this, banks need to implement a platform that allows them to have a complete view of the customer. The solution can be what provides a record of every interaction the bank has ever had with a customer.

Methodology

The solution must satisfy the following:

1. Should be able to engage customers on all channels.
2. Should be able to collect data from core and analytics systems to provide bankers with a logical and simple way of understanding.
3. Should be able to predict future customer needs.
4. Should be able to map customers to relevant solutions.

4. The blockchain solution is to improve KYC

Though KYC is an essential element for identity management, playing a vital role in tracking and preventing fraud, stringent, slow, and complex KYC processes can lead to bad customer experience. The emergence of blockchain technology has allowed banks to look at KYC from a fresh perspective and drive massive improvements.

Blockchain-based solutions enable customers to create and manage their identities, including relevant details and grant access to multiple participants. Tighter control and reduced regulatory risk are achieved with blockchain by making updates to centralized databases.

Blockchain encryption that segregates and limits clients' data to select viewers will help banks comply with data privacy and data transfer regulations.

5. Use of AI to create a seamless customer journey

With many banks facing customer retention challenges, a less than stellar onboarding experience may significantly impact customer loyalty and referrals. Banks are facing stiff competition from disruptive challenger banks offering seamless solutions with quicker turnaround time.

Onboarding customers via AI-powered mobile apps will gain popularity among banks as they can provide a personalized experience. Banks can also use AI to enhance customer support data and provide relevant information. AI-powered solutions can analyze the latest transactions and market trends to identify potential risks.

Wakeup Call- Rebuilding Trust of Customers

Customers have lost trust in the financial service industry, and this is deeply troubling to executives in the banking industry because, without faith, there can be no loyalty. The trustworthiness model identifies three factors influencing the ability to keep promises.

1. Desire to keep a promise and to have the right mindset.
2. Having the right capabilities, people, and processes to be able to keep the promise.
3. Having the right products and services having the same goal as customers.

Some of the ways by which we can achieve trust-building among the customers are as follows:

1. Cultivate an open, honest two-way relationship

Considering that "By knowing me and my goals from face to face meetings, they know me," banks must bring more to the table than just a great product to build trust between customers. A relationship thrives when there open honest two-way communication.

Wakeup Call- Rebuilding Trust of Customers

2. Put brand values front and center

People place great stock in someone that can "tell it like it is" financial services companies that believe to be forthright about their values and behave in a fashion consistent with those values. The bank needs to make its core values an essential part of their brand.

3. Respect and authenticity matters

By immersing the organization from c-suite to frontline staff in the success and frustration of real peoples' lives, the financial brand can then truly understand their needs, find new possibilities for delivering on them and strengthen the customer relationship.

The Experience that speaks for itself

Investing in a banking solution is one of the essential financial investments made by a financial institution.

Oak is the core banking solution that can handle the most complex banking requirements. The solution operates at maximum efficiency with the minimum market uptime.

With excellent subject matter expertise in our team, we can help our clients face the biggest challenges in the industry at ease.

Along with CBS, we also offer highly efficient products and services, which, when integrated with Oak CBS, makes it a most amicable solution.

Ultimate customer experience and operation efficiency for staff help the banks on the road to growth and innovation. It is what we can offer our clients through our product.

Excessive customization to the smallest requirement and astounding data security are our ideals we work on to achieve and deliver clients' success because we firmly believe that our success lies in our clients' success.

Key Features of our solution includes:

1. Centralized and time saving process.
2. Ability to provide tailored products, best suited for customers.
3. Extensive use of Business intelligence tools providing the decision-making ability.
4. Generous use of AI to analyze the market needs ahead of time.
5. Ad-on products to help serve every need of the banking institutes.
6. Customized CRM for the changing marketing strategies to retain the customers of the banks.
7. Sophisticated secure system.
